ASSIGNMENT

1. A) Read the passage and answer the following questions:-

Most plants appear green in colour. The green colour is because of the presence of a substance called chlorophyll in the leaves. Leaves use sunlight, water, carbon dioxide and chlorophyll to make food for plants. This is why leaves are also called the kitchen or food factory of plants. Leaves take in carbon dioxide from the air and release oxygen The chlorophyll in leaves absorbs the energy from the sunlight falling on them. Plants absorb water and minerals from the soil through the roots. These are then carried through the stem to the leaves.
